

**A RANGE OF WORLD-FIRST INTEGRATED COVERS FOR POOL AND LANDSCAPED AREAS.**

A finished HIDE fitted with an inlay.

**HIDE offers a range of beautiful, durable inlay cover options for pool skimmers, access points and drainage outlets. This is our latest release.**

HIDE is a kit-based range which provides superior safety, performance and durability. The HIDE kit components are easily fitted on-site by your contractor. As part of the install, your contractor will *inlay materials* which match your pool surrounds into the top of the HIDE lid. Each HIDE kit comes with everything except the *inlay materials*, because that's chosen by you!

**MUCH MORE TO LOVE**

### **SCHMICK FINISH**

A totally integrated + flush finish means the HIDE cover is essentially invisible. Your beautiful pool/patio landscape is not interrupted by a bulky or mismatched lid.

### **EASY USE**

Other skimmer lid options can be awkward to manoeuvre, hard to remove, or both. In comparison, HIDE covers are compact, and super easy to remove. After care is also a breeze.

### **LONG LIFE**

The HIDE steel frames protect the inlay materials + landscaping surrounds, preventing breakages and future batch matching headaches.

### **HIGH GRADE**

Marine grade, 316 stainless steel frames + Safety Key means a durable, long-lasting product, with a warranty!

### **POOL SAFE**

100% pool safety compliant with AU standards. Peace of mind for homeowners, plus legally protects contractors.

### **GOOD PRICE**

HIDE covers represent excellent value for money - quality, long-life products with a high-grade finish and no-fuss installation.

## BEWARE -

Other Skimmer  
Lid options have  
quality and safety  
issues.

### 01.

#### TRADITIONAL PLASTIC OPTION

- ✗ cheap looking finish which is raised, bulky and often quickly discolours in the sun
- ✗ the lid colour can't be matched to the paving, and grout lines are interrupted
- ✗ the raised lid can be a trip hazard, especially for young children
- ✗ requires regular replacement due to sun exposure, which makes the plastic brittle and susceptible to cracks and breakage
- ✗ requires regular replacement due to constant load-bearing damage if it is located on a main walkway around the pool

### 02.

#### LOOSE STONE/ TILE OPTION

- ✗ compliance issues mean young children are at risk of serious harm
- ✗ cheap looking finish with large holes, interrupted grout lines and the stone often doesn't sit flush with the surrounds
- ✗ with use, the loose stone is chipped, cracked or broken, plus can damage the surrounds
- ✗ when broken, matching new stone to existing stone is difficult, as batches change or are discontinued
- ✗ a contractor has to be recalled, usually at the homeowners expense, to match, cut + fit a new stone (which remains non-compliant)

## WHY HIDE IS BETTER?

Not all contractors are aware that Australian Pool Safety Standards have changed, and a loose stone skimmer lid is most often **NOT compliant**, and **NOT pool safe**. The traditional plastic option also has serious drawbacks - many homeowners replace it with a HIDE cover.
