

WMD115

TriStream Jet

The TriStream Jet is mounted flush to the deck, and shoots out 3 large rivulets of water at a height of up to 6 ft (1.8m) and a throw of up to 12 ft (3.7m).

NOTE: Stream Jet, Crown Jet and TriStream Jet nozzle heads are interchangeable for multiple effects.

Crown Jet

The Crown Jet produces a gentle sprinkling that both entertains children and cools. One single nozzle produces a fan of softly falling fingers of water. Both the Stream Jet and Crown Jet have interchangeable heads and are flush-mounted for pool walls. Fans of water can arch up to 6 ft (1.8 m) and work well in an array.

NOTE: Stream Jet, Crown Jet and TriStream Jet nozzle heads are interchangeable for multiple effects.

WMF076

Fyrefly™ Jet

The Fyrefly™ Jet easily flush mounts in your deck and comes in a lit and unlit version. Fine fingers of water are projected outwards in either a broom pattern or in a linear spray pattern. Install a grouping to create a playful arching effect.

WMT100/101/110/111/120/121/122

CrystalFalls™

For sizable arching waterfalls that create a dramatic effect! With throws of up to 10 ft (3 m) and spread of up to 10 ft (3 m) these waterfalls create a substantial impact. Available in unlit and lit versions for more drama in the evening. The CrystalFalls™ Jet is available for deck or wall mount applications. Single jets can act as an accent while a grouping creates a strong focal point.

LED Laminar / Fiberoptic Laminar

Crystal Fountains is the original name in Laminars for backyard entertainment. The Laminar effect is a high-tech illusion. The water is so well controlled it creates a continuous glass-like rod of water that hits the water virtually sound-free and splash-free. Lit fiberoptically or with LED technology, jets produce breathtaking evening light shows. Spectacular in pools or spas and can be in-deck mounted or installed to shoot from a planter. In a low wind area these "water rods" can reach up to 6 ft (1.8 m) height and can travel up to 10 ft (3 m) across without breaking up. Maximum heights and distances may vary according to water quality and local conditions.
