## BCN03 Starting Platform

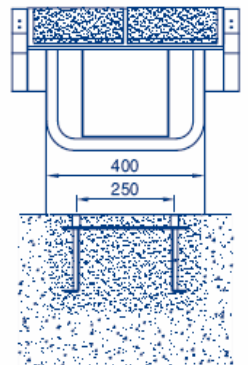

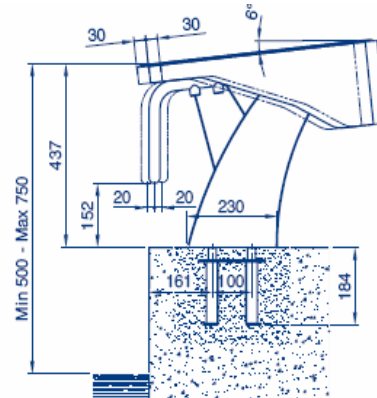

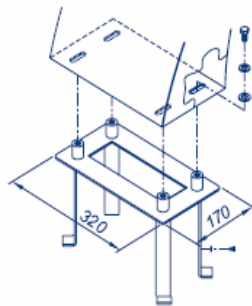

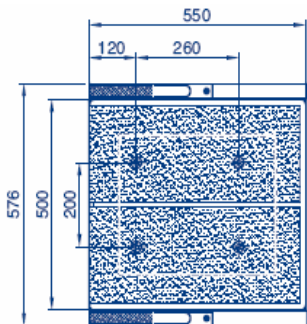

The BCN03 Starting Block, developed and patented by AstralPool for the Swimming World Championships held in Barcelona in 2003, introduces two innovations:

- Allows the swimmer to adjust the angle of the platform\* manually. They can choose the angle most suitable from the available 0°, 3°, 6°, and 10°.

\*The regulations of the international Swimming Federation(FINA) (FR2.7) allow an angel of between 0° and 10° on the starting platform. So far, all the starting blocks available in the market have consisted of a fixed unadjustable side handles.

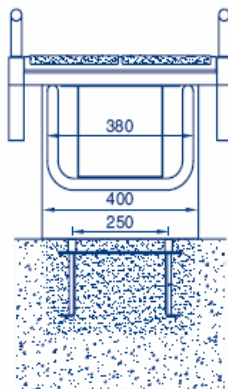

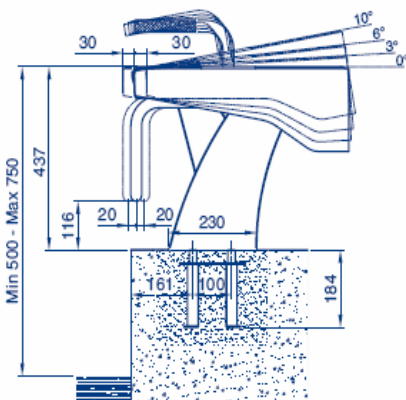

The starting block is manufactured using AISI-316 Stainless Steel. The standard starting platform can be dismantled to enable assembly of the Omega electronic timing system. It can also be adapted to other timing system to order. The platform is 550 mm long x 500 mm wide, with a polished finish, and 437 mm high.

Ideal for installation in swimming pool with side walls. Anchoring for installation in concrete is also included.
