# Bolero ND Suction Pool Cleaner

**AstralPool, one of the world's largest pool equipment manufacturers, brings its expertise to pool cleaners.**

Simple to install and suitable for low, medium and high flow rates in residential pools, the Bolero minimises the time you spend maintaining your swimming pool.

The Bolero ND is a robust and reliable system designed to clean almost any shape and pool surface. Engineered materials designed for the tough Australian environment and submersion in pool water mean long life and durability. The action of the diaphragm, (the only part that moves) means the cleaner scrubs as well as vacuums the pool floor and wall. The quality hose and fittings make installation simple.

Bolero's flow control valve is simple to operate and adjust to suit all types of installations and the flow metre supplied with every unit enables the perfect flow rate to be set on your swimming pool. Suitable for flow rates between 150 lpm to more than 300 lpm, Bolero is one of the most flexible and quiet cleaners available today.

The Bolero ND is covered by a 2 year peace of mind warranty against defects in materials and assembly. Refer to Product Instructions at [AstralPool.com.au](http://AstralPool.com.au) for full warranty details.
